

WATER RESOURCES DEVELOPMENT OPTIONS

	PREFERRED OPTION	DESCRIPTION
1	Unsustainable (bores or dams)	High rocky ridge and hill country.
1A	Generally unsuitable for dam or bore construction	Rugged rocky hill and range country, gneiss and granitic rocks, some seasonal groundwater supplies available where open fractures exist. Occasional dam sites.
4	Surface water (dams) supplemented by groundwater (bores)	Plains where groundwater supplies are generally limited with quality fair to brackish, and in a few locations saline. Many good dam sites, Mulga soils suitable.
