1 About the spatial data packages

The Department of Environment and Natural Resources is the custodian of a large array of spatial data. An overview of data resources held by the department is described in the 2018 Product Catalogue. Download the [catalogue](#) (PDF) via the Northern Territory Library.

Spatial data packages are available for free download from the department's data server. Each zipped package contains:

- spatial data in ESRI formats (File GDB and/or shapefiles) stored in geographics, datum GDA94
- metadata weblinks
- map products (PDF) if available
- technical reports (PDF) if available

Users can search and download the spatial data packages using two options;

Option A. Browse the data server directly [page 4](#)

Option B. Click on a download link provided in this document [page 5](#)

1.1 Licence terms and conditions

Standard licence

You are licensed to use the DENR geospatial products on the terms and conditions set out in: Creative Commons Attribution 4.0 International Public License (CC BY 4.0) at <https://creativecommons.org/licenses/by/4.0/legalcode> .

If you do not agree to the terms and conditions you must not use the geospatial products.

You are free to copy, communicate and adapt the licensed material, provided that you abide by the licence terms (including Attribution) and attribute the licensed material using the statement:

Supplied by the Department of Environment and Natural Resources © Northern Territory Government

Note: Some datasets may have a different attribution statement. For example, where a dataset was modified by this department, the original source is also included in the statement. Please read the Metadata record and review Access Constraint notes under the heading Dataset Status.

Links to metadata records are included in the spatial data package or refer to the listing on page 5.

If a metadata link has not provided, look up the record via the [NT Metadata Search tool](#).

1.2 Contact us

For further information or support, please contact the Geospatial Services Branch, Department of Environment and Natural Resources (DENR).

Tel: 61 (08) 8999 4577

Email: datarequests.DENR@nt.gov.au

DENR web: [Spatial data available from this department](#)

NTG web: [Spatial data available from other NTG agencies](#)

2 Option A. Access data packages via the data server

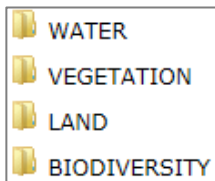

Address <https://ftp-dlrm.nt.gov.au/>
 Account **dlrmguest**
 Password **darwin**

Zipped data packages are stored in the folder **outgoing / FREE_DLRM_DATA**

- Double click the folder outgoing
- Double click the folder FREE_DLRM_DATA
- Double click a subfolder e.g. LAND and tick a zip file
- Right mouse click and select Download File or use the tool icons to download

The data server folder names are constrained by the previous department name, Department of Land Resource Management (DLRM).

2.1 What's new in the data server?

This PDF document is regularly updated. Please check the date on the footer.

To locate new or updated survey information, open a subfolder in the FREE_DLRM_FOLDER and sort by **Date Modified**.

The web-link will remain the same if an existing file has been updated.

2.2 About natural resource survey datasets

We recommend users download **NT survey index spatial datasets** to review the extents of natural resource spatial data for [LAND](#), [VEGETATION](#) and [WATER](#) resource surveys.

Each polygon contains attributes describing a resource survey dataset and includes web links to the survey metadata, reports, maps and data server download zip files.

The NT compilation index datasets are updated when a new dataset is completed or an existing dataset is amended. Note the date in the data server and sort each folder using the heading Date Modified.

The NT survey index datasets can be downloaded via links in the SURVEY INDEX section in this document.

Survey filenames use the following conventions:

Survey group prefix eg: LandUnits
Survey Identifier code eg: adelr
Survey scale eg: 15 = data scale 1:15,000

3 Option B. Access data packages via download links

The zipped spatial data packages are grouped to match the Data Server main folders. Use Control F to assist with searching.

[Download spatial data package](#)

[View metadata record](#)

Please contact us if you find errors. Thanks!
